List of Journals

The periodical and serial publications listed below are those which are currently received and scanned by INSPEC for its information services. Individual articles are selected for this abstracts journal if they are of sufficient quality and fall within the subject scope. Each entry contains the abbreviated title and country, the full title, and the publisher's name and address. The abbreviated title conforms to ISO 4-1984 (E) : *Documentation - Rules for the Abbreviation of Title Words and Titles of Publications*. The abbreviations used are from the publication *International List of Serial Title Word Abbreviations, Paris; 1985*.

A separate publication, *INSPEC List of Journals and other Serial Sources*, provides a comprehensive guide to INSPEC serial coverage from 1968 onwards. In addition to listing current serials, this publication provides details of all changed or discontinued titles. The main list is sorted under full title and each entry includes the abbreviated title, CODEN, ISSN, publisher's name and address, the date of the first issue covered by INSPEC, the publication frequency and the BLDSC shelf number. Cross-reference entries are provided to assist the user in locating titles within the list. CODEN, ISSN, abbreviated title, and country of publication indexes are included. A separate list of journals 'abstracted completely' is also provided. Details of the price of this publication may be obtained from the INSPEC Marketing Department.

The use of l’, n’ and t’ in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

‘Shch’ and ‘sht’ invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet ‘The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes’ published by the Royal Society, Burlington House, London W1 (February 1953). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.)
This is a service individually tailored to the requirements and interests of the engineer or research worker. Every two weeks details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database.

TOPICS

This is an SDI service based on standard profiles. There are over 80 subjects covering high-activity areas of research and development. This is an inexpensive service designed to alert engineers and researchers to the availability of literature within their subject area.

TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

PROPERTIES OF

Gallium

Arsenide

This new edition of 'Properties of Gallium Arsenide' comprises 182 specially commissioned articles contributed by 70 experts from the USA, Europe and Japan. Like the 1st edition, it is packed with numeric data, insight and concise discussion all systematically organised and fully subject-indexed.

Contents include all the subjects covered by the original edition revised and updated as necessary, PLUS NEW Datareviews in respect of the following to reflect the way Gallium Arsenide is revolutionising the semiconductor industry:

★ **Sheet resistivity of GaAs with atomic plane doping**
★ **Electron mobility in heterostructures**
★ **Energy levels and photoluminescence spectra due to transition metals**
★ **Electron microscopy of defects**
★ **Passivation of defects by hydrogenation**
★ **Energy levels and fundamental properties of the EL2 defect**
★ **Diffusion in GaAs/AlAs superlattices**
★ **Thermal, wet, plasma, laser-assisted and new methods of oxidation**
★ **Optical functions of AlGaAs**
★ **Plasma and ion beam etching of AlGaAs**
★ **Ion implantation ranges and rapid thermal annealing**
★ **Bulk and epitaxial growth (LEC; HB & VB; chloride VPE; CSVT; MOVCD; & MBE)**
★ **GaAs-on-Si and epitaxial liftoff**
★ **Exploitation in Devices:**
Light sources; Millimetre- & micro-wave devices; Integrated optoelectronics; Quantum effeot devices; and Solar cells
